

Overview

This AI Agent is intended to help students understand computer technology related knowledge. Information Technology can be intimidating for new students to learn. It bridges the gap between the educator and students, potentially boosting certification rates and overall success in the workplace. The target audiences this AI would be useful to would be high school, technical school, community college, and students pursuing industry certifications. The AI agent is designed for beginners who need help with understanding topics. Teachers are also targeted, as the AI serves to plan lessons and tutor when a teacher is unavailable.

How students & teachers will use the Agent

For the student side, the AI can answer technical questions, explain complex technical topics in simpler terms, provide practice exercise & quizzes, evaluate how well the student understands the material, give step-by-step troubleshooting directions, and generate realistic situations for a deeper learning experience. For the educator/facilitator side, the AI can set up personalized lessons that cater to the students learning style, provide instant feedback, provide tutoring, and take data on student progress.

How does this help education facilities?

All the functions mentioned above will solve the issue with teaching large classes. An AI Agent can become personalized based on the student's or teacher's request, allowing comprehension to be easier. Tutoring can be done instantly instead of students waiting for private lessons or having

to deal with unavailable teachers. With AI memorization capabilities, the AI agent will adapt to students & teacher's needs. Teaching becomes simpler for both teachers and students.
